Male,

born July 7, 1986 (Age: 30)

Full Stack Developer / Architect

- JavaScript (Node.JS, JQuery, Backbone, Angular, React)
- PHP (Yii, Symfony, Laravel, Zend)
- C# (.NET Framework, WCF, WPF)
- Python (Django, Flask)

Work experience — more than 10 years

May 2013 — present
4 years

BeeJee

BeeJee.org

Senior Web Developer (PHP, Node.js), COO

Projects delivered:

Playmusics - cloud music service.

Created several different prototypes in order to continuously make optimal decisions as to the working speed and convenient support. Built plug-in architecture, which ensured easy recovery when the external server went out of order.

Team: 2 developers, timeline: 2 months

My role: Early stage architecture and prototyping, management + code review in later phases.

Zwinkr: web-based dating application similar to Tinder.

External APIs, video and voice chat support, integrated payment system with internal currency. Developed the architecture, and prepared for high-load (100-200K unique users at its peak).

Team: 3 developers, timeline: 15 months

My role: Architecture, prototyping, project management, and code-reviews.

Tagfly: travelling portal, a system of blogs and tours booking.

Team: 2 developers, timeline: 6 months

Most of this project was implemented by me personally (backend, frontend, admin area).

3Shape

3shape.com

Senior C# Developer

Created public web infrastructure (web site and WCF service) which permitted the transfer of data between major company projects (desktop apps) and display 3D models for patients.

Built an efficient and scalable system architecture. Established an automated quality control and release system.

April 2010 —
March 2011
1 year

GlobalLogic Ukraine

Kyiv, www.globallogic.com.ua/

Senior C# / PLSQL Developer

Successfully developed a set of data management modules and reports – based on detailed SPECS. Initiated a discussion about on a critical development infrastructure issue, which was significantly prolonging development time. Found a possible solution

January 2007 —

Kaskad Developers Group

lead developer

Organized and established an agile development process, which entailed communication and feedback from customers, along with protocol implementation and release. Augmented labour productivity by employing detailed planning (UML) methods . Organized a Chernivtsi National University study and collaboration program, which included inspirational meetings, a programming study group, and a training lab-course for 5-year students. Developed and applied a resource accounting system (based on KASKAD).

September 2004
— January 2007

Kaskad Developers Group

Software Developer

Developed the script support, which provided an option to build interactive business-logic modules without external programming tools. We moved this engine up to 90% code. It enabled developers to split into two groups: core developers and business-logic developers. The second group required less programming knowledge, and, thus, the staff was easier to find. Developed and applied a debugging system, made changes in project architecture to make it more stable. As a result, the bugfix support time was cut in half.

Education

Master's Degree

2006

Chernovtsy Fedkovich National University, Chernovtsy

Engineering and Technology, Engineer

Key skills

Languages

Russian — native
English — fluent
German — basic knowledge
Ukrainian —fluent

Skills

PHP Node.js C# SQL ORACLE Reporting JSON API ORM Hibernate ORM

JavaScript Project Management

Additional information

About Me

I am a senior programmer with 10 years of experience in development (ERP/CRM, web, public infrastructure). I began as a trainee in a small startup, then became a team leader, and worked at various international companies as a senior developer and manager. The technical education I have received in the computer science field and my enormous breadth

of real life development experience provide me the basis to dive deep into the core of my work.
