Project History

Job Title: Senior Software Developer

Dates of Employment: September 2019 – Now

Project: E-Commerce B2C solution for European shoe retailer.

The project is in the late stage and a lot of time is spent on support and refactoring. A significant amount of tasks are dedicated to order flow delivery improvements, CI/CD enhancements are also a part of responsibilities. The team is spread across Europe.

Responsibilities: Supporting production incidents and developing new order flow features, improving CI/CD flow.

Job Title: Team Lead Java/Hybris Software Engineer

Dates of Employment: March 2019 - September 2019

Project: E-Commerce B2C shop for an upmarket furniture brand from DACH region.

The project was in the stage of transfer between 2 teams, so Kanban approach was applied. The main focus was on the customer assistant support system which required SAP webservices interaction along with DIVA system interaction.

Responsibilities: CI/CD and Git strategies setup and support, production support, tasks related to DIVA configuration application to the e-commerce system.

Job Title: Team Lead/Software Developer

Dates of Employment: December 2018 – February 2019

Project: E-Commerce B2C solution for a European grocery retailer.

Stream: Production Support

The main focus of the team was urgent production issues handling, that required a lot of Kibana logs investigation and .groovy scripts development. Apache Solr was one of the areas where more investigation and fixing was required. The team had to transfer to the Kanban approach to become more flexible in urgent bugs resolution.

Responsibilities: Performing distributed team leader responsibilities. Working on a sub-project related to creating a custom business process for the new type of fulfillment.

Job Title: Software Developer

Dates of Employment: July 2018 – December 2018

Project: E-Commerce B2C solution for a European grocery retailer.

Stream: SEO

As SEO became on the main team domains, it was crucial to integrate with services provided by Google. The Google Merchant Center integration required a fundamental approach and changes in all application layers. Spring MVC and IMPEX frameworks allowed to transfer of advised Google approach to e-commerce platform architecture.

Responsibilities: Having full ownership over a two-phase sub-project related to integration with Google Merchant Center. Supporting production after releases, fixing urgent bugs in short terms.

Job Title: Software Developer

Dates of Employment: May 2018 – June 2018

Project: E-Commerce B2C solution for Canadian Clothing and Accessories retailer.

The pre-release stage of the project was proceeding under strict deadlines, in order to meet them some people were temporarily involved to solve "out of team capacity" tasks. The scope was mainly dedicated to order fulfillment and emailing, so that required changes in process engine which is built on Spring framework and .vm templates.

Responsibilities: Customization of email processes, changing fulfillment processes according to flexible business requirements.

Job Title: Software Developer

Dates of Employment: March 2017 – April 2018

Project: E-Commerce B2C solution for a European grocery retailer.

Stream: Administration cockpits

The team was mainly responsible for working with administration cockpits which required a lot of XML configuration and .jsp changes. The project was at the fast-growing stage, so all processes were changing and a lot of people were coming. The CI/CD stabilization was one of the main team goals at that moment.

Responsibilities: Working on a project during its' transformation to a monthly-release approach. Taking CI/CD duty responsibilities, developing stories under strict deadlines, participation in MTP's (move to production) procedures.

Job Title: Software Developer

Dates of Employment: March 2016 – February 2017

Working on multiple Hybris internal projects.

Job Title: Freelancer

Dates of Employment: February 2013 – March 2016

Working on multiple web projects.

Education

Bachelor's degree, Software Engineering, Kharkiv National University of Radioelectronics.
